

SPOTLIGHT

ALIGNED West Jordan, Utah

Aligned is a data center and infrastructure technology company, based in Plano, Texas, that offers innovative, sustainable and adaptable colocation and build-to-scale

solutions for cloud, enterprise, and managed service providers. Their intelligent infrastructure technology enables customers to scale up without disruption, all while maintaining industry-leading Power Usage Effectiveness (PUE) of 1.15. By reducing the energy, water and space needed to operate, their built-to-scale data center solutions offer businesses a competitive advantage by improving reliability and increasing cost savings.¹

Aligned is expanding their business and supporting data center expansion with \$495 million procured from investors. A new 240,000-square-foot facility with 48-megawatt capacity is being built in West Jordan, Utah, with the goal of building a massive campus that will offer a total of 780,000 square-feet and 130 megawatts of capacity. According to Aligned CEO Andrew Schaap, "Our second West Jordan facility will provide adaptable, efficient and sustainable data center infrastructure to enable enhanced availability, performance and scale for customers' growing cloud and application workloads in the region."²
