

SPOTLIGHT

NATIONAL OCEANIC & ATMOSPHERIC ADMINISTRATION Silver Spring, Maryland

The National Oceanic and Atmospheric Administration (NOAA) is an agency that enriches life through science and works to understand and predict changes in climate,

weather, oceans, and coasts. NOAA science includes discoveries and ever new understanding of the oceans and atmosphere, and the application of this understanding to such issues as the causes and consequences of climate change, the physical dynamics of high-impact weather events, the dynamics of complex ecosystems and biodiversity, and the ability to model and predict the future states of these systems. From daily weather forecasts, severe storm warnings, and climate monitoring to fisheries management, coastal restoration and supporting marine commerce, NOAA's products and services support economic vitality and affect more than one-third of America's gross domestic product. NOAA services include climate predictions and projections; weather and water reports, forecasts and warnings; nautical charts and navigational information; and the continuous delivery of a range of Earth observations and scientific data sets for use by public, private, and academic sectors. ¹
