

## Modern Touch Screen Available for Advanced Environmental Controller

### Data Aire Reveals New User Interface with dap4 touch

**Orange, CA | OCT 25, 2018** Data Aire, Inc. is proud to announce the dap4 *touch* for its precision cooling controller. The dap4 is the industry's most advanced controller serving the telecom, government, special constant environments and indoor agriculture markets.

- The modern color touch screen allows easy access at your fingertips.
- The at-a-glance simplified screens offer a holistic view of the environment including: air temperature, humidity and unit operation status.
- New trending screens allow the user to monitor temperatures and humidity in real time or historically.
- A variable compressor screen (gForce Ultra model) allows the technician to see the compressor envelope operating conditions.
- The new display makes it easier for technicians to troubleshoot and manage mission critical environments.
- Starting in November 2018, units with locally mounted displays will include the dap4 *touch*. By early 2019, the dap4 *touch* will be available on all units.
- The dap4 *touch* will also be available as an easy-to-install upgrade to existing dap4 LCD displays.

### **About Data Aire**

Data Aire combines extensive expertise in control logic with world-class manufacturing capability recognized by key international quality certifications. For those seeking reliable, scalable and customized technology, we provide the solutions of choice. Our precision air control equipment and intelligent energy management solutions serve customers worldwide in diverse applications ranging from edge computing and collocation data centers, or medical imaging rooms to markets such as telecom, archives, government, agriculture, airports and higher education.
